Go to: https://renkulab.io/projects/datascience_exts/applications-machine-learning

The screenshot shows the RenkuLab interface for a project named 'applications_machine_learning'. The top navigation bar includes the RenkuLab logo, a search bar, and links to 'Dashboard', '+', a folder icon, a question mark, and a user profile icon. The project card features a green 'appli' placeholder image, the project name, the owner 'exts workshop', and the path 'datascience_exts/applications-machine-learning'. It also shows 'Project' and 'Private' status, a 'Start' button, and a dropdown arrow. A 'Linked datasets' section lists 'ham data'. Below the project card, a navigation bar includes 'Overview' (selected), 'Files', 'Datasets', 'Workflows', 'Sessions', and 'Settings'. On the left, a sidebar shows 'General' (selected), 'Stats', and 'Commits'. The main content area displays the 'README.md' file, titled 'Applications in Machine Learning', which states 'This repository contains 3 case studies:' and lists 'anomaly detection', 'time series analysis', and 'text classification'. Action buttons for 'Fork' (45), 'GitLab', and 'Clone' are visible.

Once you give us your username, we can add you as a “developer” you can access the repository we have added you to, using the following link:

https://renkulab.io/projects/datascience_exts/applications-machine-learning

Go to: https://renkulab.io/projects/datascience_exts/applications-machine-learning

The screenshot shows the RenkuLab interface for a project named 'applications_machine_learning'. The top navigation bar includes the Renku logo, a search bar, and links to 'Dashboard' and other user-related icons. The project header displays the project name, its location 'exts workshop', and a 'Start' button. A 'Linked datasets' section lists 'ham data'. Below the header, a horizontal menu contains 'Overview', 'Files', 'Datasets', 'Workflows', 'Sessions', and 'Settings'. On the left, a sidebar lists 'General', 'Stats', and 'Commits'. The main content area shows the 'README.md' file, which is titled 'Applications in Machine Learning' and describes a repository containing three case studies: anomaly detection, time series analysis, and text classification. A red circle and the text 'Click here' point to the 'Fork' button, which shows 45 forks. Other buttons for 'GitLab' and 'Clone' are also visible.

Applications in Machine Learning

This repository contains 3 case studies:

- anomaly detection

You should have been redirected directly to the new forked project (the instance of **applications_machine_learning** that is hosted on your profile). Then click on **start**, to **start** a new session.

⚙️ Back to giulia.ruggeri/applications-machine-learning

The session could not start because the image is still building. Please wait for the build to finish, or start the session with the base image

Start session

On the project

giulia.ruggeri/applications-machine-learning

A session gives you an environment with resources for doing work. The exact details of the available tools depends on the project.

The resource settings have been set to the project defaults, but you can alter them if you wish.

Docker Image building

⚙️ The Docker image for the session is being built. Please wait a moment...

You can use the base image to start a session instead of waiting, but project-specific dependencies will not be available.

unified nomenclature

Cloud Storage Use data from S3-compatible storage sources like AWS S3, Google Cloud Storage, etc.

[Configure Cloud Storage](#)

Default Environment

/lab

/rstudio

This step might take a maximum of a few minutes. Time to grab a coffee!
Wait until the Docker image is built and becomes available (in green).

On the project
giulia.ruggeri/applications-machine-learning-5

A session gives you an environment with resources for doing work. The exact details of the available tools depends on the project.

The resource settings have been set to the project defaults, but you can alter them if you wish.

1 GB

Click here  ☒ Automatically fetch LFS data

Environment Variables (Optional)
[Add Variable](#)

 [Start session](#) 

Click here

After some time, you should be prompted with this window. Keep all the options as is apart for the “Automatically fetch LFS data”, that you should start.

Then click on “Start session”. At this point, your virtual environment is building, which may take a few minutes. Do not worry if it takes a long time, this is normal the first time.

Step 2 of 2: Starting Session

Starting the containers for your session

- ☒ Initialization
- ☐ Downloading server image
- ☐ Cloning and configuring the repository
- ☐ Git credentials services
- ☐ Authentication and proxying services
- ☐ Auxiliary session services
- ☐ Starting session
- ☐ Connecting with your session

[Open Logs](#)

It may take some more minutes for all checks to become green and got the Jupyterlab environment to open.

**After few minutes, your Jupyterlab environment opens directly in your browser.
This is the environment we will use during the workshop.**
