The screenshot shows the Renku web interface. At the top, there is a dark blue header with the Renku logo on the left, a search bar in the center, and navigation links on the right. The 'Projects' link is circled in green. Below the header, a yellow banner contains a maintenance notice about a Kubernetes upgrade. The main content area is divided into three columns. The left column shows the user's profile 'giulia.ruggeri @ Renku' and a section titled 'Recent Projects' which is circled in green. Below this, a project card for 'data science basic' is shown, updated 4 months ago. The middle column is titled 'Your recent project' and shows a similar project card for 'data science basic', updated 7 minutes ago. The right column contains a 'First time' message, a 'Help' section with links to the tutorial, forum, Gitter channel, GitHub repository, and documentation, and the 'renkulab.io' logo.

Projects Datasets Sessions + ? 📁 👤

🔧 Maintenance scheduled in 19 hours from now: *Kubernetes upgrade*.

We will upgrade the underlying Kubernetes to version 1.23.8. Some nodes will not be available during the upgrade and the Renku services will be restarted.

See [details](#) for information about the availability and limitations.

First time

If you are here for your first time, we recommend you go through our [tutorial](#).

Help

If you need help, the preferred way to reach us is via the [Renku forum](#), the [Gitter channel](#) or the issue tracker in our [GitHub repository](#). You can also browse the [general Renku documentation](#) as well as the [command-line interface docs](#).

renkulab.io

Renku is under active development. We encourage you to have a look around,

Once you give us your username, we can add you as a “developer” to our projects.

The project will appear in your main Renku page as: **datascience_exts/**
applications_machine_learning. If you do not see it under “Recent Projects”, you can access it
through the project tab! Click on it!

The screenshot shows the Renku web interface for the project 'applications_machine_learning'. The top navigation bar includes the Renku logo, a search bar, and links for Projects, Datasets, Sessions, and user actions. The project page header shows the project name, a 'Private' status badge, and a 'Start' button. Below the header, there are tabs for Overview, Collaboration, Files, Datasets, Sessions, and Settings. A sidebar on the left contains links for General, Stats, Commits, and Status. The main content area displays the 'README.md' file, which includes the title 'Applications of Machine Learning', a description of the repository's contents, a list of case studies, and a section for 'Anomaly Detection'. A red circle highlights the 'Fork' button, with the text 'Click here' above it.

We are now in the forked version of the project

The screenshot shows the GitLab interface for a forked repository. At the top, the repository name 'applications_machine_learning' is displayed with a 'Private' badge. Below it, the text 'giulia.ruggeri/applications-machine-learning forked from datascience_exts/applications-machine-learning' is visible. A 'Start' button is in the top right. A navigation bar includes 'Overview', 'Collaboration', 'Files', 'Datasets', 'Sessions', and 'Settings'. On the left, a sidebar lists 'General', 'Stats', 'Commits', and 'Status'. In the main area, there are buttons for 'Fork', '0' (forks), '0' (stars), and 'View in GitLab'. The 'View in GitLab' button is circled in red, with the text 'Click here' above it. Below the buttons, a 'README.md' section is shown with the title 'Applications of Machine Learning' and a list of case studies: 'anomaly detection', 'time series analysis', and 'text classification'. The section 'Anomaly Detection' is highlighted, followed by the text 'This repository provides the resources for the talk and accompanying hands-on exercises on **Anomaly Detection**' and a 'Dataset' section.

Click here

And again, we click on “Run pipeline”.

You can now close the tab and go back to Renku.io

The screenshot shows a web browser window with multiple tabs. The active tab is titled "Pipeline · GitLab" and is circled in red. The browser address bar shows the URL "https://renkulab.io/gitlab/giulia.ruggeri/fso-workshop/pipelines/185071". The GitLab interface displays the "fso_workshop" project. In the left sidebar, the "CI / CD" section is expanded, and "Pipelines" is selected. The main content area shows a pipeline status of "running" (indicated by a blue icon and the word "running" in a blue box, which is circled in red). The pipeline is triggered by "Giulia Ruggeri". Below the status, it shows "1 job for master" and a commit hash "0c6aee5a". A red button "Cancel running" and a red button "Delete" are visible. A handwritten note "Last commit name" with an arrow points to the commit hash. Another handwritten note "No worries if this text is different" is also present. The bottom of the page shows a "Build" section with a job named "image_build".

Wait until you see the blue icon “running”.

You can now close the tab and go back to Renku, where we were before.

Welcome to your new Renku project! It looks like this project is just getting started, so here are some suggestions to help you.

- Add some datasets** Datasets let you work with data in a structured way, facilitating easier sharing. You can create a new dataset with data you already have, or importing one from another Renku project or from a public data repository such as [Zenodo](#) or [Dataverse](#).

README.md

Spam Detection

Talk @ Applied Machine Learning days 2020 - [Google slides](#)

In your own instance of project (check above that you are in your own project, forked from the main one), go to the “Sessions” tab.

The screenshot shows the GitLab interface for a repository named 'applications_machine_learning'. The repository is private and was forked from 'datascience_exts/applications-machine-learning'. The 'Sessions' tab in the top navigation bar is circled in red, with a red arrow pointing to it and the text 'Click here' below it. The repository has 0 forks, 0 stars, and a 'View in GitLab' button. The README file is displayed, titled 'Applications of Machine Learning', and lists three case studies: anomaly detection, time series analysis, and text classification. The 'Anomaly Detection' section is also visible, mentioning resources for a talk and exercises.

☒ Automatically fetch LFS data

Start session

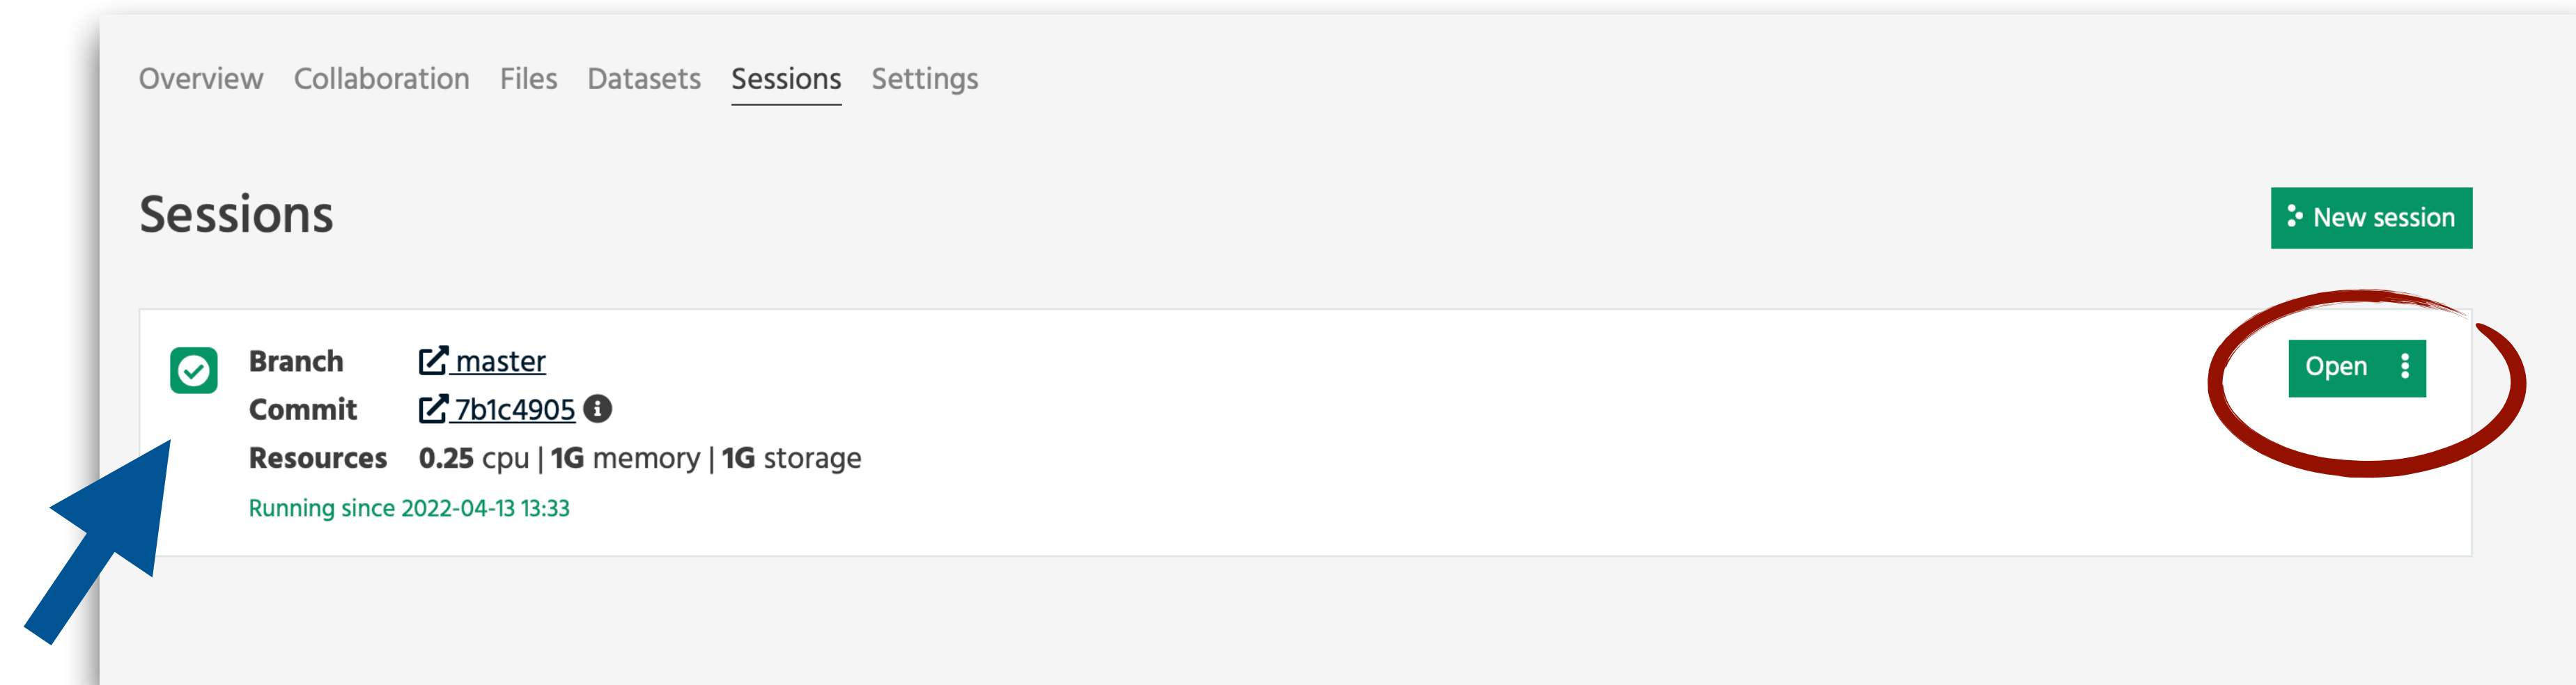

Click here

Click here

After some time (generally a few seconds), you should be prompted with this window. Keep all the options as is apart for the “Automatically fetch LFS data”, that you should start.

Then click on “Start session”. At this point, your virtual environment is building, which may take a few minutes.

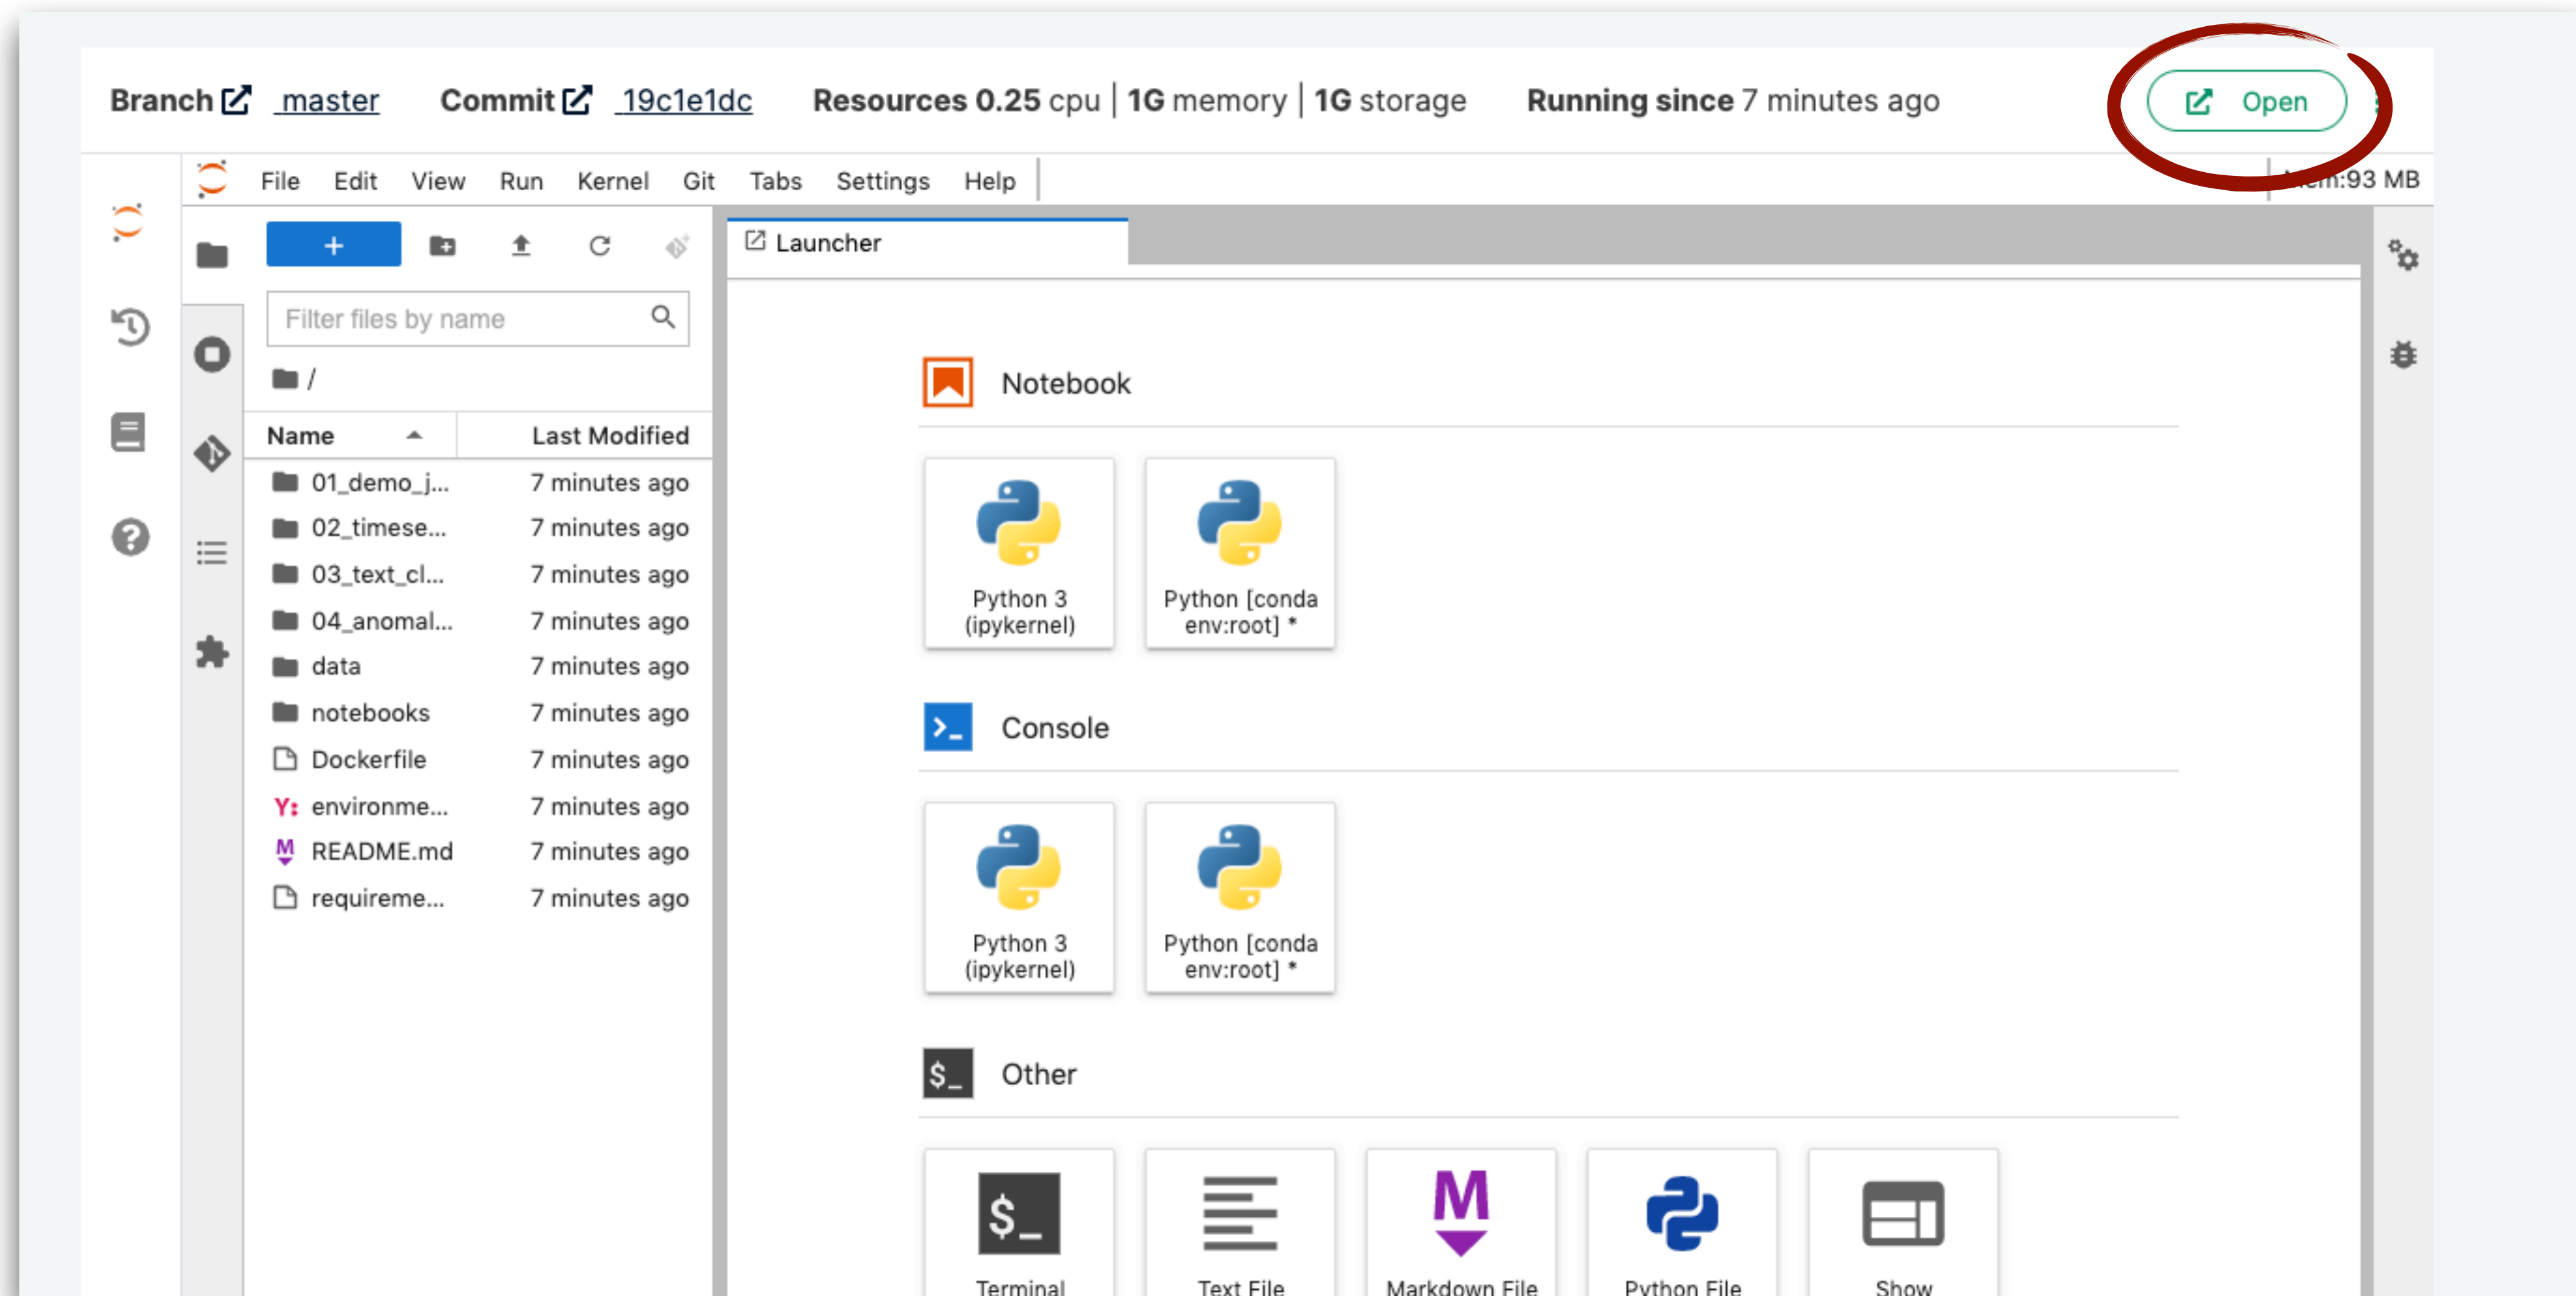

Do not worry if it takes a long time, this is normal the first time.

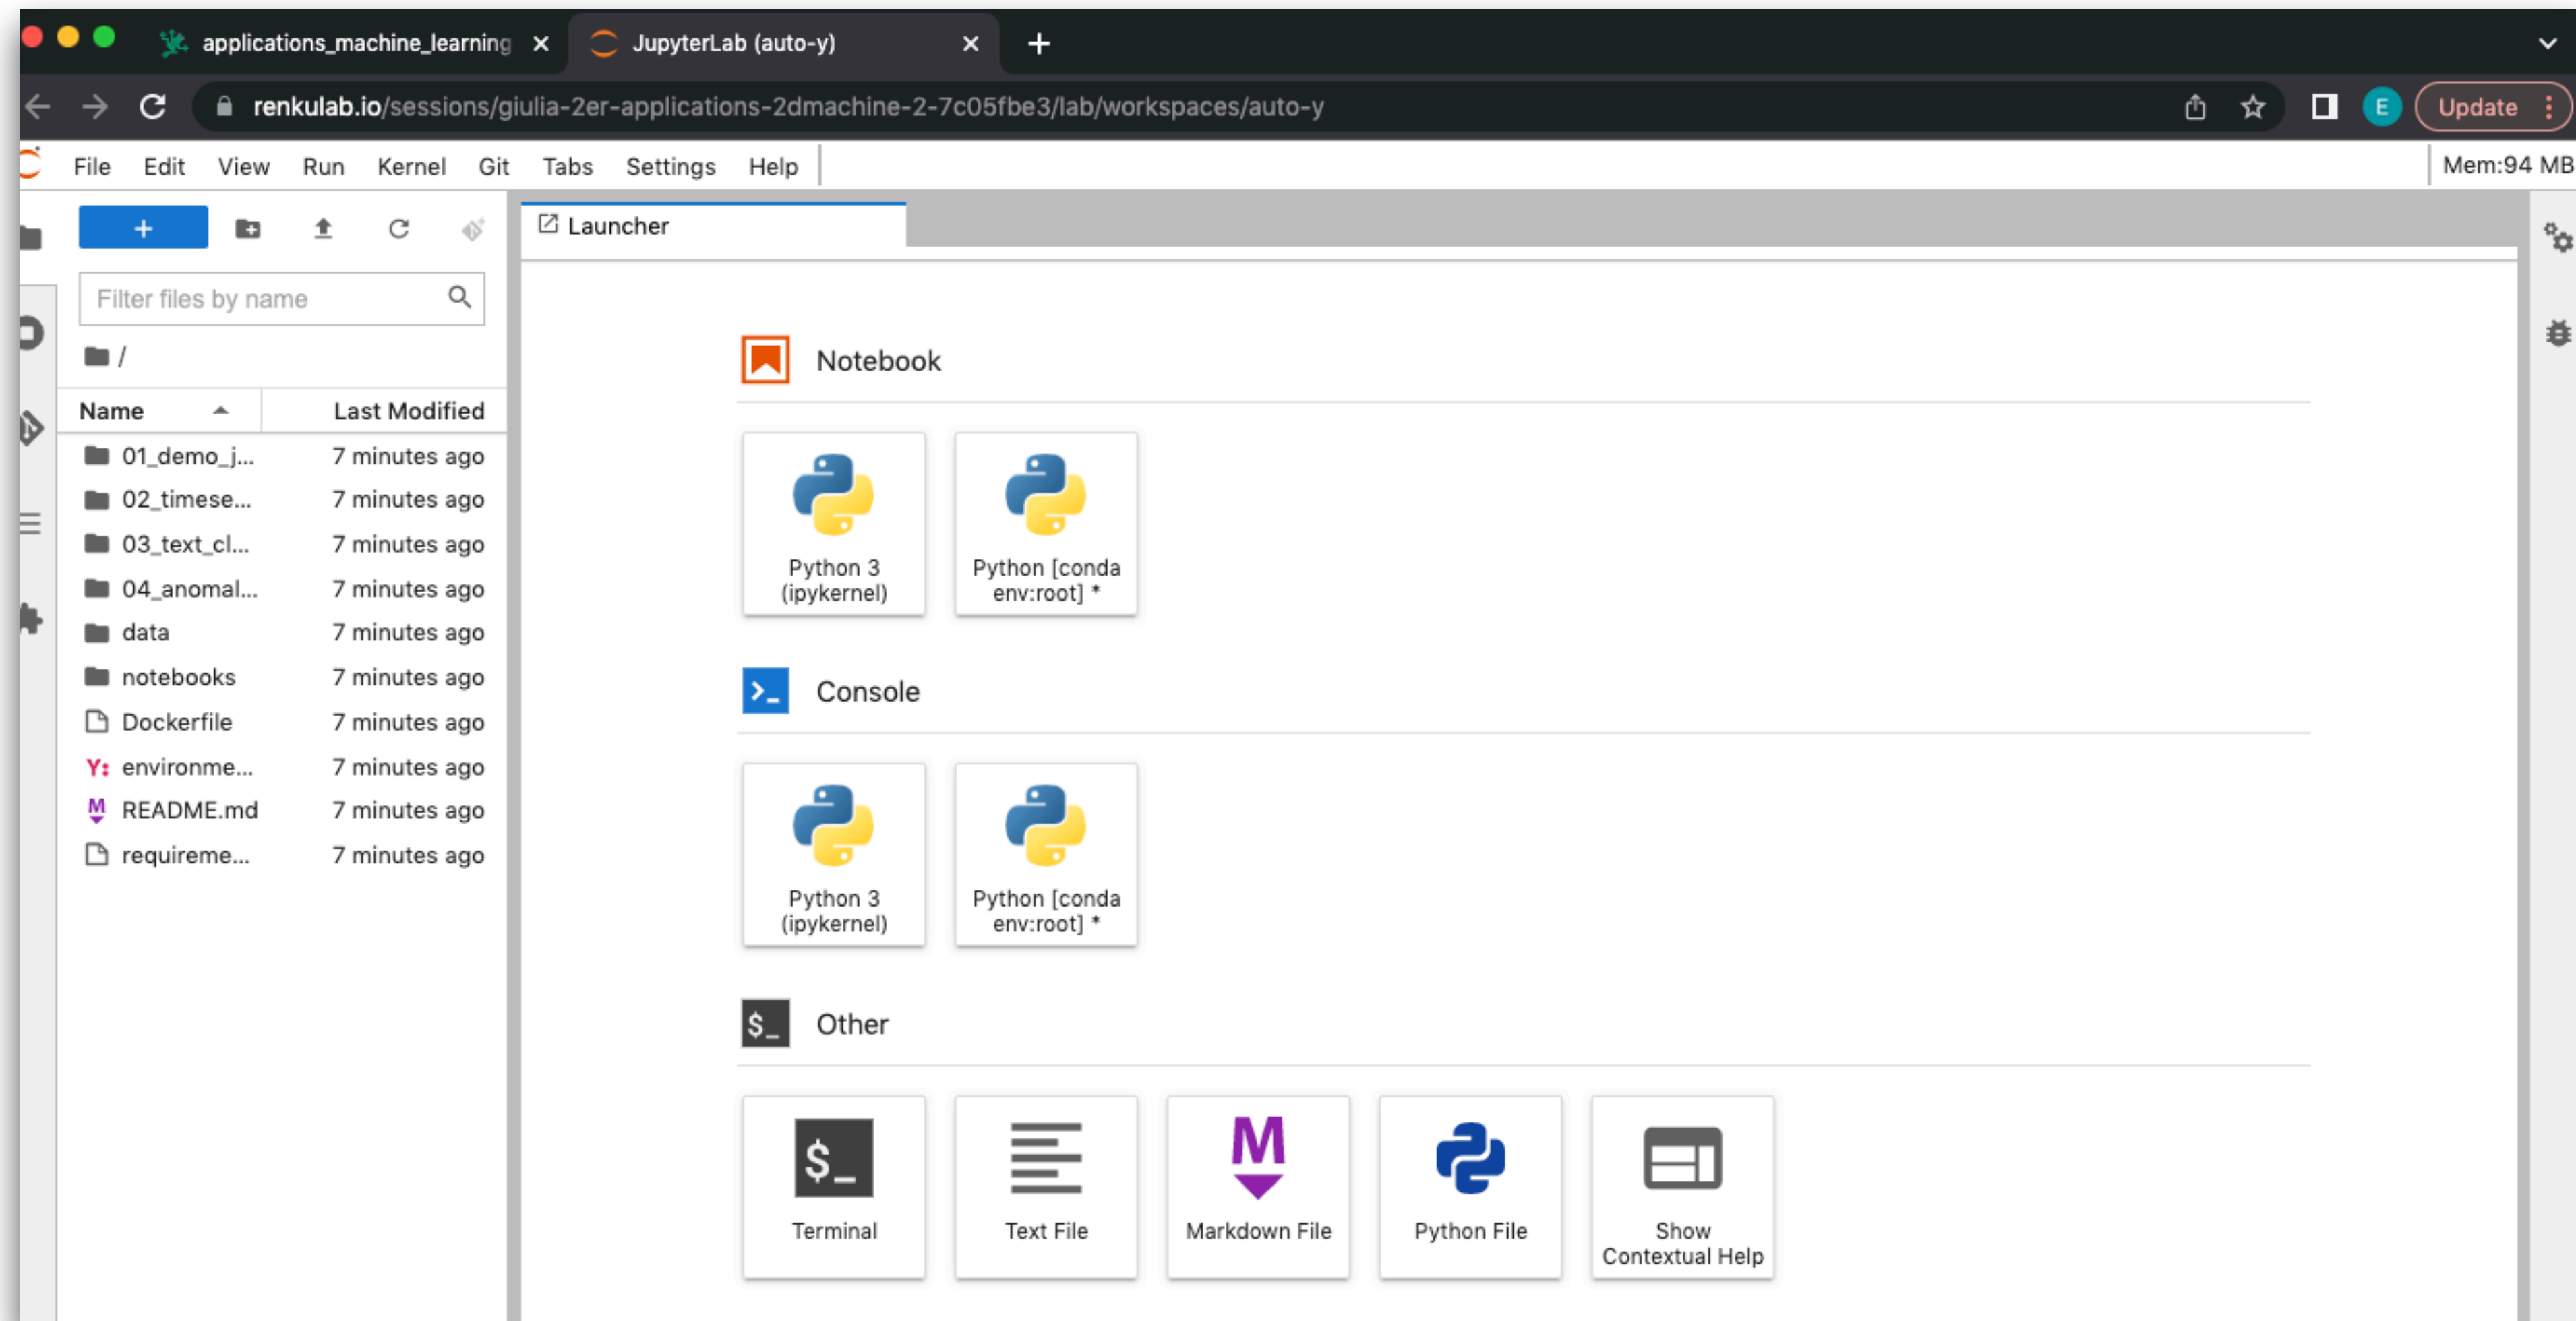

You will see a rotating yellow square for some minutes before it becomes green.

It may take some time to build this.

Once the square is green, you can connect to your virtual environment. We will do it during the workshop, no worries. If you already want to see what it looks like, click on “Open”.

And then click again on “Open”.

*If you open it, your Jupyterlab environment opens directly in your browser.
This is the environment we will use during the workshop.*
